

Title: Empowering Clinical Research: Grant Programmes for Physicians and Hospital-Based Clinical Projects in Luxembourg

This presentation will provide an overview of two key funding programs managed by the Luxembourg Health Directorate to support clinical research: the Grant Program for Clinician-Scientists and the Hospital-Based Clinical Research Program (PRC). These initiatives aim to strengthen the integration of research within clinical practice by providing dedicated funding for physicians engaged in research and for hospitals conducting structured clinical research projects. The presentation will outline the objectives, eligibility criteria, funding mechanisms, and application procedures for both programmes, and highlight how they contribute to advancing patient-centered research in Luxembourg.
